

Release checklist

Repository source: RELEASE_CHECKLIST.md

Candidate version: 0.1.0-dev **Candidate date:** unreleased **Checklist updated:** September 19, 2026

A checked item means that evidence exists in the current construction checkpoint. It does not authorize publication by itself.

A. Mathematical claim

- ☒ Exact theorem numerator and denominator are fixed in the authoritative certificate.
- ☒ Lower and near-Jung circumradius branches cover the full Jung interval.
- ☒ 03B02 is the exact lower-branch bottleneck.
- ☒ Near-Jung handoff margin is strictly positive in exact arithmetic.
- ☒ Width scaling restores the factor d^3 .
- ☒ Paper states no sharpness, equality, minimizer, or Meissner-extremality claim.
- ☐ Independent subject-matter reviewer has checked the mathematical reduction.

The unchecked external-review item is not required to label a release as a non-peer-reviewed research draft, but its absence must remain prominent.

B. Exact certificate and audits

- ☒ Standalone verifier has no private-repository dependency.
- ☒ Immutable proof objects have SHA-256 fingerprints.
- ☒ Exact certificate reconstructs byte identically.
- ☒ Independent binary64 Python audit passes.
- ☒ Independent base-R audit passes on the named author's machine.
- ☒ Ten reconstruction/regression tests pass.
- ☒ Seven adversarial mutations are rejected.
- ☒ Export-equivalence record checks ten theorem-critical fields.
- ☐ Complete replay passes from the final release tag on a fresh machine.

C. Paper

- ☒ Lean Paper v1 contains only the proof supporting this coefficient.
- ☒ The theorem coefficient and proof-critical constants are generated from the certificate.
- ☒ Paper/certificate reconciliation passes.
- ☒ Reference PDF builds and has been visually inspected page by page.
- ☒ Paper limitations and computer-assisted status are explicit.
- ☐ Final author list and order approved.
- ☐ Affiliations, corresponding author, ORCID identifiers, and acknowledgments approved.
- ☐ Repository URL, version, date, and archival identifier inserted.
- ☐ Final PDF approved by every named author.

D. Documentation

- ☒ Reproducibility guide.
- ☒ Verification-status page.
- ☒ Trust-boundary document.

- ☒ Claims-and-limitations document.
- ☒ Certificate specification.
- ☒ Independent-audit record.
- ☒ Mathematical overview.
- ☒ Claim-dependency graph.
- ☒ Proof ledger and internal proof audit.
- ☒ Source ledger with dated literature check.
- ☒ Exact-constants appendix generated from the certificate.
- ☒ Certificate-architecture appendix.
- ☒ Replay-transcript appendix.
- ☒ AI-assistance and provenance disclosure.
- ☒ Clean-source/fresh-extraction record.
- ☒ Draft release notes and release checklist.
- ☒ Every Markdown source has a checksummed PDF counterpart in the prepared overlay.
- ☐ Final copy edit and link review by the named author.

E. Metadata and legal

- ☐ Public repository name confirmed.
- ☐ Repository description confirmed.
- ☐ License selected and LICENSE added.
- ☐ CITATION.cff finalized and validated.
- ☐ Preferred paper citation finalized.
- ☐ Version changed from 0.1.0-dev to approved release version.
- ☐ RELEASE_DATE changed from UNRELEASED to the approved date.
- ☐ DOI or archival identifier added only after one exists.
- ☐ Copyright and third-party data/license review completed.

No license or citation metadata should be invented to make these boxes appear complete.

F. Continuous integration and portability

- ☒ Workflow has separate Python, base-R, and document jobs.
- ☒ Hosted document job installs Poppler and checks fonts/text/page validity.
- ☒ Local Mac without Poppler is documented rather than treated as a theorem failure.
- ☒ PDF byte identity across platforms is not required.
- ☐ Three hosted jobs are green on the final main commit.
- ☐ Three hosted jobs are green on the immutable release tag.
- ☐ Clean tagged-checkout replay is recorded in CLEAN_CLONE_CHECK.md.

G. Release assets

- ☐ Paper PDF asset built from the tagged checkout.
- ☐ Paper-source archive built from the tagged checkout.
- ☐ Standalone certificate archive built from the tagged checkout.
- ☐ Documentation archive built from the tagged checkout.
- ☐ Replay-transcript archive built from the tagged checkout.
- ☐ One release-asset SHA256SUMS.txt generated and independently checked.
- ☐ Every downloaded asset reverified in a clean directory.
- ☐ Release notes PDF generated from the final Markdown source.

H. Public wording and approval

- ☒ Draft wording says “computer-assisted” and “not peer reviewed.”
- ☒ Draft wording does not say “sharp,” “optimal,” “proved Meissner,” or “independently certified.”
- ☒ Earlier public spectral repository is clearly separate.
- ☒ Private sequel results and history are absent.
- ☐ Named author approves README.

- ☐ Named author approves theorem wording.
- ☐ Named author approves release notes.
- ☐ Named author approves announcement text.
- ☐ Named author explicitly approves creation of the public remote.
- ☐ Named author explicitly approves publication of the GitHub release.

Release decision

Current decision:

DO NOT RELEASE YET. The mathematical and documentation packages are prepared, but authorship, licensing, citation, public-remote, hosted-CI, tagged-replay, asset, and explicit approval gates remain open.
